

Weekly Report (2017.6.26-2017.7.2)

Done

- 1) Help Dr. Mei to check up on ChinaVis paper. In the meantime, look up to related works. This make me have a deeper understanding of Construction Tools for Information Visualization.
- 2) Review the database paradigm related content. Prepare for the redesign of the database for the project LAN visual analysis.
- 3) Check out some interesting visualization cases on <http://djchina.org/showcase/>. In the spare time I saw the website on Lao Tianyi's computer, and looked up to it. Out of inertia, I always focus on implementation, and learned that many places will use Canvas. However, I never try to use Canvas to implement anything, I plan to try this some day in the near future. Maybe try to implement this result firstly. <http://drones.pitchinteractive.com/>.
- 4) Fix the CPU fan.

To Do

- 1) Redesign the database based on the requirement.
- 2) Rebuild the system framework and transplant some of the original module.
- 3) Implement the new hierarchy diagram.
